Example 3.20 Find the output y(n) of a filter whose impulse response is $h(n) = \{1, 1, 1\}$ and input signal $x(n) = \{3, -1, 0, 1, 3, 2, 0, 1, 2, 1\}$ using (i) overlap-save method (ii) overlap-add method. (Annamalai Unverisity Apr' 03)

Solution

(i) Overlap-save Method

The input sequence can be divided into blocks of data as follows.

$$x_1(n) = \underbrace{\{0,0\}}_{M-1=2 \text{ Zeros}} \underbrace{3,-1,0}_{L=3 \text{ data points}}$$
 $x_2(n) = \underbrace{\{-1,0,\}}_{\text{Two datas from previous block}} \underbrace{1,3,2\}}_{\text{data points}}$
 $x_3(n) = \{3,2,0,1,2\} \text{ and } x_4(n) = \{1,2,1,0,0\}$

given
$$h(n) = \{1, 1, 1\}$$

Increase the length of the sequence to L + M - 1 = 5 by adding two zeros.

i.e.
$$h(n) = \{1, 1, 1, 0, 0\}$$

 $y_1(n) = x_1(n) \ N \ h(n) = \{-1, 0, 3, 2, 2\}$
 $y_2(n) = x_2(n) \ N \ h(n) = \{4, 1, 0, 4, 6\}$
 $y_3(n) = x_3(n) \ N \ h(n) = \{6, 7, 5, 3, 3\}$
 $y_4(n) = x_4(n) \ N \ h(n) = \{1, 3, 4, 3, 1\}$

Note: Circular convolution of the sequences left as an exercise to the students.

discard

$$4, 1, 0, 4, 6$$

discard

 $6, 7, 5, 3, 3$

discard

 $1, 3, 4, 3, 1$
 $discard$
 $y(n) = \{3, 2, 2, 0, 4, 6, 5, 3, 3, 4, 3, 1\}$

(ii) Overlap-Add method

Let the length of data block be 3. Two zeros are added to bring the length to five (L+M-1=5).

Therefore,

3.56 Digital Signal Processing

$$y_{3}(n) = x_{3}(n) \underbrace{ \left(\begin{array}{c} N \end{array} \right) h(n)}_{} = \{0, 1, 3, 3, 2\}$$

$$y_{4}(n) = x_{4}(n) \underbrace{ \left(\begin{array}{c} N \end{array} \right) h(n)}_{} = \{1, 1, 1, 0, 0\}$$

$$\underbrace{ \begin{array}{c} 3, 2, 2, -1, 0 \\ \hline 1, 4, 6, 5, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 1, 1, 1, 0, 0 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \downarrow \\ \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}{c} 0, 1, 3, 3, 2 \\ \hline \end{array} \right) \text{ add}}_{} \underbrace{ \begin{array}$$

Example 3.21 Using linear convolution find y(n) = x(n) * h(n) for the sequences x(n) = (1, 2, -1, 2, 3, -2, -3, -1, 1, 1, 2, -1) and h(n) = (1.2). Compare the result by solving the problem using (a) overlap-save method (b) overlap-add method

Solution -

The linear convolution of x(n) and h(n) is

$$y(n) = x(n) * h(n) = \{1, 4, 3, 0, 7, 4, -7, -7, -1, 3, 4, 3, -2\}$$

Overlap-save method

The input sequence can be divided into blocks of data as follows.

$$x_1 = \{0, 1, 2, -1, \}$$

$$3 \text{ datas}$$

$$x_2(n) = \{-1, 2, 3 - 2\}$$

$$3 \text{ new datas}$$

$$M - 1 = 1 \text{ data from previous block}$$

$$x_3(n) = \{-2, -3, -1, 1\};$$
 $x_4(n) = \{1, 1, 2, -1\};$ $x_5(n) = \{-1, 0, 0, 0\}$

Given $h(n) = \{1, 2\}$. Appending two zeros to the sequence we obtain

$$h(n) = \{1, 2, 0, 0\}$$

 $y_1(n) = x_1(n) (N) h(n)$

$$= \begin{bmatrix} 1 & 0 & 0 & 2 \\ 2 & 1 & 0 & 0 \\ 0 & 2 & 1 & 0 \\ 0 & 0 & 2 & 1 \end{bmatrix} \begin{bmatrix} 0 \\ 1 \\ 2 \\ -1 \end{bmatrix} = \begin{bmatrix} -2 \\ 1 \\ 4 \\ 3 \end{bmatrix}$$

$$y_2(n) = x_2(n) \underbrace{\begin{pmatrix} N \end{pmatrix} h(n)}_{p_2(n)} h(n)$$

$$= \begin{bmatrix} 1 & 0 & 0 & 2 \\ 2 & 1 & 0 & 0 \\ 0 & 2 & 1 & 0 \\ 0 & 0 & 2 & 1 \end{bmatrix} \begin{bmatrix} -1 \\ 2 \\ 3 \\ -2 \end{bmatrix} = \begin{bmatrix} -5 \\ 0 \\ 7 \\ 4 \end{bmatrix}$$

Similarly
$$y_3(n) = \{0, -7, -7, -1\}; \quad y_4(n) = \{-1, 3, 4, 3\};$$
 $y_5(n) = \{-1, -2, 0, 0\}$

$$\begin{array}{c} -2,1,4,-3 \\ \downarrow \\ \text{discard} \\ \hline -5,0.7,4 \\ \downarrow \\ \text{discard} \\ \hline 0,-7,-7,-1 \\ \downarrow \\ \text{discard} \\ \hline -1,3,4,3 \\ \downarrow \\ \text{discard} \\ \hline -1,-2,0,0 \\ \downarrow \\ \text{discard} \\ \hline y(n) = \{1,4,3,0,7,4,-7,-7,-1,3,4,3,-2\} \\ \end{array}$$

Overlap-add method

In this method the sequence x(n) can be divided into data blocks as shown below.

$$x_1(n) = \{1, 2, -1, 0\}$$

$$M - 1 = 1 \text{ zero added}$$

$$x_2(n) = \{2, 3, -2, 0\}; \quad x_3(n) = \{-3, -1, 1, 0\}$$

$$x_4(n) = \{1, 2, -1, 0\}; \quad h(n) = \{1, 2, 0, 0\}$$

Example 3.22 The linear convolution of length-32 sequence with a length-1000 sequence is to be computed using (a) overlap save method and (b) overlap-add method. The circular convolution of the impulse response sequence with each data block is to be obtained using DFT and IDFT method with N=64. Find the number of DFIs and IDFTs required to obtain y(n) for both methods.

Solution Given; $L_s = 1000; M = 32; N = 64$

(a) overlap save method

In this method since (M-1)=31 data points are lost we pad the data sequence with 31 zeros. The length of data sequence $L_s + M - 1 = 1031$.

For N = 64, the convolution of h(n) with data block results in 64 - 31 = 33correct values.

The total number of DFTs required for the data are $\left\lceil \frac{1031}{33} \right\rceil = 32$.

One DFT is required to find DFT of impulse response. Hence the total number of DFTs is 33 and IDFTs is 32.

(b) overlap-add method N = 64

In each data block M - 1 = 31 zeros appended. Hence each data block has 64 - 31 = 33 datas. Thus the total number of DFTs required is $\left[\frac{1000}{33}\right] = 31$.

One DFT is required for impulse response,

The total number of DFTs required is 31 + 1 = 32The total number of IDFTs required is 31.
